

Vijay Chouhan (Full Stack Engineer)

Results-driven Full-Stack JavaScript Developer with 5+ years of experience building scalable, high-performance web applications using React.js, Next.js, and Node.js. Strong expertise in designing clean, maintainable architectures, optimizing application performance, and delivering seamless user experiences. Proven ability to translate complex business requirements into efficient, production-ready solutions while maintaining code quality, scalability, and long-term sustainability. Passionate about continuous improvement, modern best practices, and creating products that deliver real business impact.

EXPERIENCE

Senior Software Developer | Full Stack Engineer

Thoughtwin IT Solutions, Indore | Sep 2021 - Present

Contributed to the successful creation of powerful UI features for excellent user experience.

Optimized application stability and data flow through the implementation of efficient state management using Redux and Redux-Toolkit.

Enhanced code quality and developer productivity in a complex codebase by leveraging TypeScript's static typing capabilities.

Utilized Material-UI, Tailwind CSS,SASS, Flexbox, CSS, and HTML5 to design visually appealing and intuitive user interfaces.

Played a key role in cross-functional collaboration efforts to integrate Google Map and Google Places API, ensuring the seamless incorporation of dynamic and location-based features for users.

Ensured seamless end-to-end functionality by collaborating closely with backend developers to integrate frontend components with backend services.

Continuously enhanced expertise through research into up-and-coming innovations in software development.

PROJECTS

Project: Habitake – Cloud-Native Property Management Ecosystem

- ❖ Habitake Backend Platform: A high-performance, cloud-native property management and social ecosystem built on AWS using a serverless microservices architecture.
 - Languages: Rust (Performance-critical logic), Node.js (AI Integration), GraphQL.
 - Cloud (AWS): Lambda, AppSync (GraphQL), DynamoDB (Single-table design), Cognito (Auth), S3, SQS (Async processing), OpenSearch (Search service), SES/SNS.
 - AI: Google Gemini (Generative AI for image creation).
 - DevOps: GitHub Actions, Dependabot.

Project: Sootra – Comprehensive SaaS Platform & Admin Dashboard

- ❖ Designed and developed a scalable, dual-frontend web application featuring a user-facing productivity portal and a robust administrative dashboard, built with

Indore, Madhya Pradesh, India

er.vijaychouhan88@gmail.com

Technical Skills:

Languages: JavaScript (ES6+), TypeScript, JSON

Libraries/Frameworks: ReactJS
Next.js, Node.js, MongoDB, Express.

State Management: Redux, Redux-Toolkit,

Styling: Material-UI, Tailwind CS
SASS, Flexbox, CSS, HTML5

Version Control: Git/GitHub

Third-party API: Google Map, Google Places API, Apple, Firebase, Github.

Project Management: Jira, ClickUp

SEO: Search Engine Optimizatio
best practices

modern React ecosystem tools.

- ❖ **Dual-Application Architecture:** Successfully architected and maintained two distinct React applications (User Frontend & Admin Dashboard) ensuring code reusability and consistent design patterns.
- ❖ **Advanced Content Editing:** Integrated Monaco Editor for code-based workflows and GrapesJS for a drag-and-drop web building experience, demonstrating capability with complex third-party library integrations.
- ❖ **High-Performance State Management:** Utilized Redux Toolkit for complex client-side state and React Query for efficient server-state synchronization, caching, and optimistic updates.
- ❖ **Code Quality Pipelines:** Configured ESLint, Prettier, and Husky pre-commit hooks to maintain high code standards, along with SonarQube integration for static code analysis.
- ❖ **Real-Time Features:** Implemented Socket.io connections to handle real-time data updates and notifications across the platform.
- ❖ **Tech Stack**
 - Core: React 18, TypeScript, Vite
 - State Management: Redux Toolkit, React Query (TanStack Query)
 - UI/Styling: Material UI (MUI v6), Toolpad Core, Responsive Design
 - Forms & Validation: React Hook Form, Zod Schema Validation
 - Complex Integrations:
 - Code Editor: Monaco Editor (VS Code engine)
 - Page Builder: GrapesJS (Drag-and-drop builder)
 - Rich Text: React Quill
 - Drag & Drop: @dnd-kit, react-dnd, react-grid-layout
 - Data Visualization: Chart.js, Recharts, Heatmap.js
 - Real-time & Utils: Socket.io-client, Axios, Day.js, JSPDF

Project: **MyTicketPartner (Next.js & TypeScript)**

- ❖ **White-Label Event Ticketing & Management Platform**

A comprehensive SaaS platform enabling organizations to create, manage, and promote events while facilitating seamless ticket booking, sales, and marketing operations. The system supports full white-labeling, allowing clients to host events under their own branding.
- ❖ **Responsibilities & Achievements**
 - Developed a scalable white-label architecture using Next.js dynamic routing ([organization]), allowing different organizations to host event pages with custom branding and subdomains.
 - Built a complex multi-step Event Creation Wizard featuring:
 - Ticket Management: Dynamic creation of multiple ticket tiers and pricing structures.
 - Venue Layouts: Interactive tools for setting up event layouts and seating arrangements.
 - Financial Configuration: Granular control over tax rules, booking fees, and payout settings.
 - Marketing Tools: Integrated modules for managing promo codes, discounts, and event add-ons.
- ❖ Implemented a secure Booking & Checkout flow integrated with Stripe for real-time payments, handling complex scenarios like tiered pricing, taxes, and timed cart reservation.
- ❖ Engineered the "Organization Dashboard", a data-rich admin interface for organizers to track sales, manage attendees, process refunds, and visualize earnings via ECharts.
- ❖ Developed User-Centric Features including a "Ticket Wallet" for managing

bookings, a specific Ticket Transfer system allowing users to send tickets to friends, and automated Refund Request workflows.

- ❖ Optimized Application Performance & SEO by leveraging Next.js Server-Side Rendering (SSR) and Static Site Generation (SSG), ensuring fast load times and high search engine visibility for public event pages.
- ❖ Integrated Internationalization (i18n), enabling the platform to support multiple languages to cater to a global audience.
- ❖ Ensured Code Quality by setting up rigorous linting and formatting pipelines (ESLint, Prettier, Husky) to maintain a clean and consistent codebase across a large team.
- ❖ Highlight "Telehealth": Telehealth is a huge industry keyword. Mention words like HIPAA-ready patterns, Virtual Consultations, and Real-time Patient Engagement.

Project: CRED-iQ

- ❖ Built a high-performance, enterprise-grade React application for financial data visualization and geospatial analytics. The platform serves as a critical tool for analyzing commercial real estate data, leveraging complex state management and real-time mapping capabilities.
- ❖ Contributions & Achievements
 - Architected a Type-Safe Frontend by integrating GraphQL Code Generator to automatically sync TypeScript interfaces with the API schema, reducing runtime errors by 40%.
 - Implemented Redux Observable (RxJS) middleware to handle complex asynchronous side effects (e.g., concurrent data fetching, cancellation, debouncing) in a declarative manner.
 - Designed a scalable folder structure separating components, state (Epics/Reducers), and graphql queries to support long-term maintainability.
- ❖ Configured automated deployment pipelines for multiple environments (Dev, UAT, Live) using AWS CLI, ensuring consistent and reliable releases to S3 and CloudFront
- ❖ Built a comprehensive design system using Material UI and BlueprintJS, ensuring a consistent and responsive user experience across the application.
- ❖ Implemented Role-Based Access Control (RBAC) and secure authentication flows using Auth0, protecting sensitive financial data.
